STATINTL

Note on ONE 129 cu ft file (per discussion with [REDACTED] today)

This file is composed of:

- a) Extra copies of NIE's for supplementatl distribution.  
ONE has a schedule whereby ~~excess~~ the number of extra copies is reduced at specified period of time. After a few years, the number kept is very small.
- b) Developmental files containing all background and input papers to the NIE's.  
ONE policy is to retain these deveoppmental files "permanently". These files constitute the bulk of the 129 cu.ft. - probably over 100 cu. ft.  
If any of these were destroyed, it would probably have to be these on non-priority areas and which are 10 or 15 years old. Joe estimates that the volume which could be saved by such destruction would be very small. We concluded the space gain would not justify the raising of the policy challenge by Col. White...which is what it would take.

Accordingly, I agreed to remove the ONE file from my DCI Area report to the Board on the basis that, although it is relatively large in the GCI scene, it:

- is smaller than the three files that remain in my report.
- the space gain, given a change in ONE policy, appear small.
- it would therefore be misleading (false promise) to include mention of the file.
